GAIA  
PROJECTS

## Birthing the Vision

On Sept. 15th in 2011, six visionaries came together to found GAIA, the proprietary firm behind the GAIA-Energy-Projects brand. Their unifying chord was a burning desire to chase the dream of changing the world instead of embracing the realities of everyday life. Today, that dream has attracted more than 3000 enthusiasts, dreamers, pioneers, sponsors, and extraordinarily gifted people and keeps growing. One of such dreams, the GAIA-Energy-Projects, aims to alter the future of sustainable energy to-day. The game plan is simple: the team travels the world to find promising energy projects, passes them through rigorous tests before being thrown open to a global investor pool. The endgame is even better: Inventors never have to worry about lack of funding for their ideas again and investors have never invested in uncertain projects.

## The Challenge of Saving the World From Burning Out

Due to industrialization, explosive population growth and the surge in technological development over the past few decades, modern societies have developed an enormous demand for energy. Fossil fuels have been the mainstay for powering nearly everything we need in our daily lives. The results have been climate change, global warming, air pollution and diseases, all of which have made every living thing on earth today an endangered

species. To save our earth and stop air pollution, therefore, we need cleaner ways of producing energy. Sadly, very promising projects in this regard mostly die for lack of funding

## The Solution

There are many ways, but not all lead to desired destinations. At GAIA-Energy-Projects, we believe that the solution to the world's energy challenges lies within new ways of producing energy, like the GBI-Power unit or our fully automatic HHO-Drycell and Mining Containers, all tested, verified and standardized by GAIA mark of quality. These equipment defy common sense in the way they produce completely cost-free energy that is independent on wind, sun or other renewable or fossil fuels. With additional multiple ways of combining these devices, we provide our customers with smart solutions for better energy management.

## GEP Tokens

With our token, you become part of the next generation of energy production. Everyone owning the GAIA token will receive 20% discount for all products from our projects. All our products have to be bought via our GEP token and anyone who wants to sell our devices can do so and can then decide to sell them for fiat or our GEP. Additionally, the token will enable you to participate in votes.

In stage 2 we intend to extend the usage of our GAIA tokens to a real currency equivalent. Every GBI-Power unit will be virtually connected, and you can sell and buy kWh with GPro Tokens, in case you need more energy or want to feed some of yours into the grid. Also, token holders will be enabled to discuss current projects and vote for upcoming projects because we strongly value the opinion of our token holders. Our token will be listed on an exchange as soon as possible.

## Our Team:

CEO  
Dipl. Oec. Robert J Reich

COO – GBI - Power Unit  
Roberto Reuter

COO – Mining Container  
Heiko Erxleben

Chief Certification Officer  
Dipl. Ing. Andreas Fr. v. Brandenburg

Communication & Marketing  
Christian Steiner

HHO – Heater  
Christoph Beiser
